

# AMULET

FUTURISTIC GERMICIDE

## Produced with Atoms

The ultimate solution for Bacterial fungal and Viral Infections in AquaCulture

### The Challenge

**Mortality rate in affected ponds leads in high.**

The occurrence of five types of disease : tail necrosis, shell disease, red disease, loose shell syndrome (LSS) and white gut disease (WGD) is by Vibrio spp. in shrimp from culture ponds. Among these LSS, WGD and red disease caused mass mortalities in shrimp culture ponds.

The diseased shrimp showed symptoms of stunted growth and opaque white gut visible through the transparent cuticle as a white steak. The shrimp consumed feed in large quantities and released fecal matter in the form of a white fluid material.

### The Solution

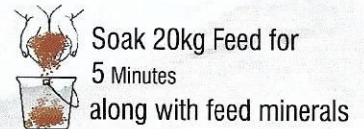

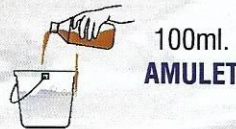

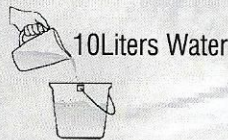

Based on nano technology we developed a Shrimp Protec liquid, a specific formula containing antimicrobial encapsulated phytoextracts in nano form which can improve growth and survival rate. Aquaculture research tests have shown that a phytogetic solution has the ability to kill several bacteria including Vibrio spp like V. parahaemolyticus etc, cholera, E. Coil and it might even stop growth of virus.

### Dose & Application :

Add 10ml AMULET per liter of water to soak 2 kg feed  
Duration 6 to 8 days in all feeds.

A Product of :

EURO Certification (UK)Ltd.
